## Anonymize patient data and/or clinic data on JPEG and AVI files

With the Voluson E6 and E8 BT09 it is possible to store your 2D, 3D and 4D in jpg and avi format without Clinic data and Patient data.

After selecting patients or images for Export the following screen will appear:

Select jpg, avi with **C**.

In the anonymize part you can select which data needs to be anonymized. This will anonymize all images selected. Now your images and clips for example in powerpoint presentations are anonymized!
