Archive and Review with unlimited, encrypted cloud storage
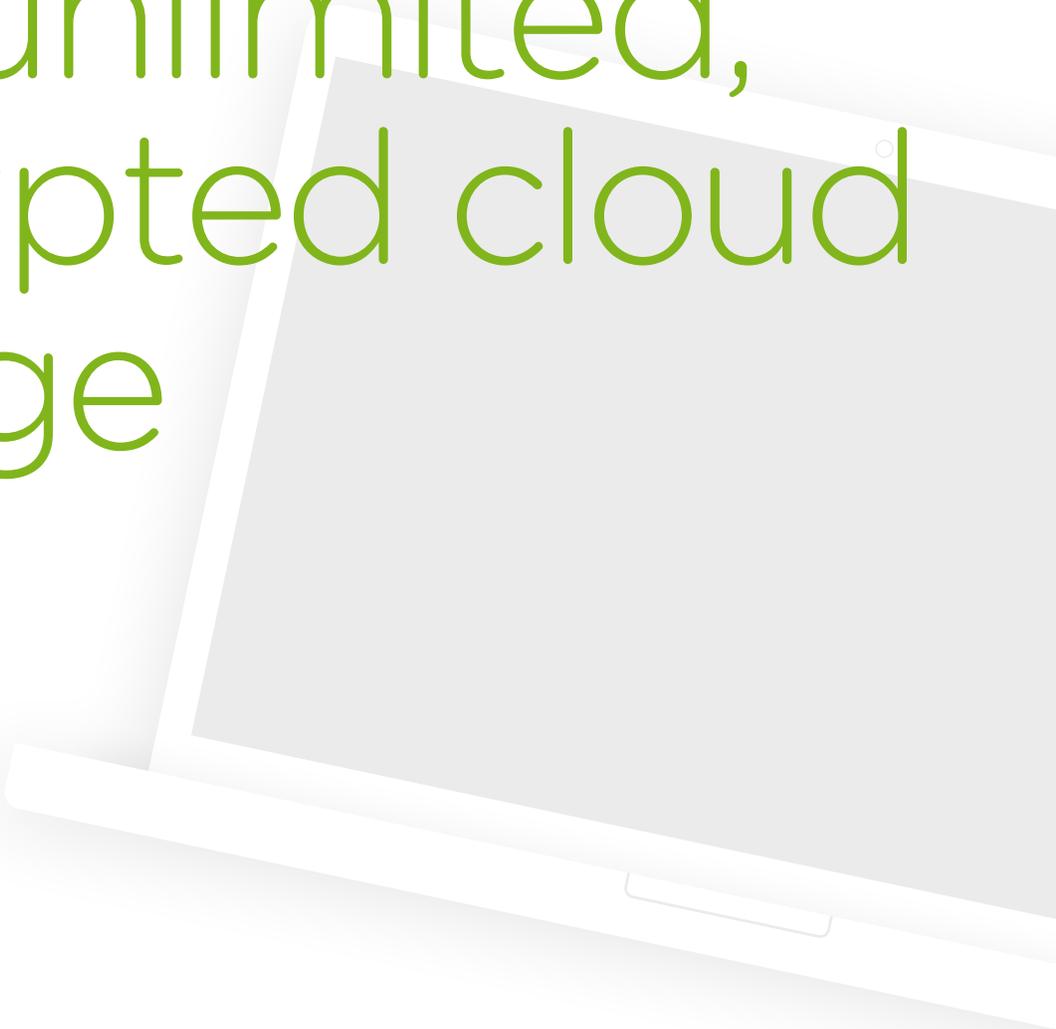

"Last week I was in Europe for an important conference and through the Tricefy™ platform I was still able to review studies and assist my co-workers on a daily basis."

- Dr. Andrew Garber, Perinatal Associates

Trice

Long-term archive.
Compliant. Intuitive. Secure.

Help your facility satisfy HIPAA compliance requirements with unlimited, secure, long-term cloud storage. Tricefy™ gives you an exceptional tool for reviewing, archiving, searching and managing encrypted, high-resolution medical images and studies

Tricefy™ is innovating the way healthcare providers share and collaborate with patients and colleagues through a web-based, image routing platform for medical images and cine clips from any modality, anytime, anywhere.

- Automatically connects each modality to long-term storage through a single button

- Protect your patients data and privacy while exceeding requirements for data protection and off site storage

- Eliminates servers, backing-up on DVDs, external hard drives and/or tape drives

- Ability to migrate legacy files and studies for a complete archive

- Data can be labeled, searched and aggregated, which could assist in research or accreditation efforts

- A cloud-based system requiring no hardware or software investment or change to the clinic's work flow

- HIPAA compliant with FDA Class I classification, protected by multiple patents

- A single Internet connection, 5 minutes for installation, 10 minutes to learn and 1 button to press - regardless of the imaging system currently in place

- Highly secure, scalable and redundant platform

- Optimizes workflow and satisfies modern expectations for better patient care

How Tricefy™ works

01 Send data from imaging device or imagine software

02 Review and store studies in Tricefy™

03

Collaborate on cases with colleagues

Share images with patients

Upload/download data from Tricefy™ to other systems
